- Chapter I, Table 4 - For all countries other than the USSR, figures for gross consumption of commercial and non-commercial sources of primary energy represent production, net exchanges and movement of stocks; for the USSR, the figures relate to production only.
- Chapter I, page 36 - "Table 28 is an attempt to give a supply and demand picture for petroleum products in 1955 in Eastern Europe and the Soviet Union", which (according to page 5 of Annex II) is "based partly on Austrian railway and Danube shipping statistics".
- Chapter II, pages 32-37 - "...consumption in several Eastern European countries and exports to several non-European countries have had to be estimated. On the basis of these data, it has been possible to arrive at the approximate estimates of oil consumption the USSR has given in Table 8."
- Chapter II, page 38 - "... official data (for Eastern Europe) are also lacking in the volume of oil consumption in past years."
- Chapter II, page 50 - "(the Eastern European and USSR replies) did not include any data relating to production and consumption of energy beyond 1960".
- Chapter II, page 51 - "...the development of energy production and consumption in Eastern Europe could be based only on extrapolation of past trends with the support of some unofficial forecasts made for certain countries or for some energy sectors."
- Chapter III, page 3 - "The only available estimates (regarding nuclear energy production) for the more distant future are those of the OEEC Electricity Committee."
- Chapter III, pages 54-59 - Information on Eastern European refining capacity, taken from U.S. publications - World Petroleum and Petroleum Times.
